TESTING SYSTEMS
ENGINEERED & MANUFACTURED FOR INDUSTRIAL CERTAINTY

Confidence starts with verification

In OEM and industrial manufacturing testing is not the final step.

It is part of how quality is defined.

ConverterTec OEM Testing Systems support validation of performance safety and compliance throughout the production process. From single components to complete assemblies our systems help ensure that what you deliver performs exactly as intended.

OEM Design & Manufacturing from rapid prototyping to full-scale production

- High-volume production
- Build-to-print & build-to-spec
- High-mix low-volume production
- Fast prototyping
- Strategic dedicated sourcing
- Flexible and fast NPI

Renewable Energy

Power generation

Marine

Industrial machinery

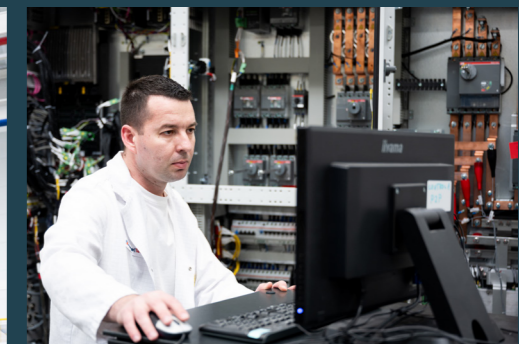

Transport

Where our Testing Systems are applied

- Verification of electrical and functional parameters
- End-of-Line testing and quality control
- Prototype validation and process development
- OEM production and serial manufacturing

Where precision repeatability and process confidence are essential, our systems support consistent results.

Designed for industrial testing environments

Our Testing Systems are developed to operate reliably in demanding production conditions.

- Adapted to OEM requirements
- Compatible with automated lines and standalone stations
- Designed for repeatable and traceable results
- Ready for long term industrial operation

Every system is configured around your product logic not around generic test assumptions.

Engineering driven testing solutions

We support OEM customers from early development through serial production. Our approach combines engineering expertise practical system design and industrial standards. Testing Systems by ConverterTec OEM help reduce risk improve consistency and support reliable production processes

Key Features

Configurable for AC/DC, HV, or control signal testing

Compatible with PLCs, inverters, harnesses, and more

Software-controlled for automation and test accuracy

Built with off-the-shelf, replaceable industrial components

Compact footprint for test labs and shop-floor use
